

The background features a light beige color with several concentric circles in a light grey tone. On the left side, there are four stylized icons in a mustard yellow and dark blue color palette: a clapperboard at the top, a megaphone in the middle, a professional video camera on a tripod in the center, and a smaller video camera on a tripod at the bottom. A dark blue rectangular box is positioned on the right side of the slide, containing white text. There are also two small, dark blue, eight-pointed starburst symbols, one above and one below the dark blue box.

Executive Summary

- The Q1 2016 viewership data shows strong and accelerating platform growth with 9,890 viewing records from 4,080 unique users across South Africa. Monthly viewing increased from 2,183 records in January to 4,761 in March.
- The audience is predominantly **male (90%)** with the strongest concentration among **24–40 years**. Geographically **Gauteng leads the market** accounting for 36% of users followed by the Western Cape and KwaZulu-Natal.
- Sport is the platform's leading content driver with Supersport Live Events and the ICC Cricket World Cup 2011 attracting the highest number of sessions.
- Viewing activity is concentrated during prime²-time evening hours particularly between 5pm and 9pm with Friday and Saturday recording the highest engagement.
- Key opportunities include expanding beyond the current male-dominated audience, increasing reach in underrepresented provinces, and leveraging live sport and peak viewing periods to drive further growth and engagement.

Business Objective

The primary business objective is to use audience viewing data to understand customer behaviour and improve content and scheduling decisions.

BrightTV aims to identify who is watching, what content they prefer, where they are located, and when they watch. These insights can be used to:

Target underrepresented audience segments and support user growth:

- Identify high-performing channels and guide content investment.
- Optimize programming and advertising around peak viewing periods.
- Identify regions with strong potential for growth and targeted marketing.
- Measure viewer engagement and understand the depth of consumption.

The objective is to turn viewing data into actionable insights that help BrightTV grow its audience, to improve content strategy and maximize viewer engagement.

Data And Methodology

Data Overview

- 9,890 viewing records from 4,080 unique users
- Data covers January–March 2016
- User attributes include gender, age and province
- Viewing attributes include channel, date, time, weekday and sessions

Data Preparation

Joined user profile attributes and viewing activity.

Deduplicated users using User ID to identify 4,080 unique viewers.

Converted UTC date and time fields to South African Standard Time (SAST) to accurately reflect local viewing behaviour.

Standardized channel names and checked for missing or invalid values.

Validated key fields including age, dates, hours and User IDs.

Who Are Our viewers?

- Predominantly male 90% male vs. 10% female.
- Young to middle aged are the core audience is 24–40 years old, with peaks around ages 27, 32 and 39.
- Gauteng accounts for 36% of users, followed by Western Cape (18%) and KwaZulu-Natal (11%).
- Sports content is particularly SuperSport and cricket, attracts the largest audiences.
- Evening and weekend viewers usage is strongest between 5pm and 9pm, particularly on Fridays and Saturdays.

Viewers Vs Gender

How Are Users Watching?

The viewing behaviour shows a clear prime-time and weekend pattern

- Evening-led: Viewing increases through the day and is strongest between 5pm and 9pm.
- Weekend focused is friday 1,673 sessions and Saturday 1,633 have the highest activity.
- Monday is the weakest with only 956 sessions, suggesting lower engagement at the start of the working week.
- Supersport Live Events and cricket are among the strongest content performers.
- Leisureoriented behaviour is concentrated in evenings and weekends suggests viewers are primarily using BrightTV during after-work and leisure periods.

Weekday Vs Total Sessions

Hour Vs Total Sessions

Viewing Patterns

BrightTV viewing follows a clear prime-time and weekend pattern:

Peak viewing: Activity is highest between 5pm and 9pm, indicating strong evening engagement.

Strongest days: Friday and Saturday generate the most sessions.

Lowest day: Monday records the lowest viewing activity.

Daytime viewing: Sessions build steadily from the morning before reaching the evening peak.

Content behaviour: Sports and entertainment content are major drivers of viewing, particularly during high-traffic periods.

Channel Performance

BrightTV's channel performance is strongly driven by sport supported by music and entertainment.

- Supersport Live Events is the top-performing channel with 1,637 sessions.
- ICC Cricket World Cup 2011 follows closely with 1,465 sessions.
- Channel O (1,048) and Trace TV (952) demonstrate strong demand for music and entertainment.
- SuperSport Blitz (896) further reinforces the importance of sports content.
- General entertainment channels such as CNN, M-Net and E! attract significantly fewer sessions.

Channels	Total Sessions
Supersport Live Events	1661
ICC Cricket World Cup 2011	1465
Channel O	1048
Trace TV	952
SuperSport Blitz	896

Low Consumption Opportunities ⚡

The data highlights several areas where BrightTV has lower audience consumption and potential growth opportunities:

- Monday viewing has the lowest weekly activity, creating an opportunity to use promotions, special programming or targeted content to increase engagement.
- Female viewers account for only 10%, indicating a significant opportunity to broaden the audience.
- Viewers under 18 and over 55 are relatively limited, suggesting potential for targeted content strategies.
- Gauteng dominates viewing, while several provinces contribute less than 10%, indicating room for regional audience growth.

Recommendations

- Assess their strategic value and determine whether the channel attracts a specific audience segment that is currently underrepresented.
- Low consumption may be partly caused by poor placement rather than weak content.
- Promote selected programmes during high-traffic periods to determine whether demand can be increased.
- Compare cost versus audience value and use session performance alongside carriage/licensing costs to determine whether each channel is worth retaining.
- Consider replacement or renegotiation where consistently low-performing channels do not provide strategic value.
